DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to a thin film transistor substrate, classified in class 257, subclass 59.
 - II. Claims 18-28, drawn to a method of making a thin film transistor substrate, classified in class 438, subclass 149+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process from the process of claim 18, for instance by replacing the process step comprising formation of said impurity doping regions in a self-aligned manner by one in which said impurity doping regions are formed using any other alignment technique based on masking layers specifically introduced for alignment: only the final structure matters in the product, not the method achieving said final structure.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
